SUMMARY

I am a planetary scientist specializing in spacecraft data analysis and numerical modeling, currently working as an Assistant Professor at Physical Research Laboratory (PRL), Ahmedabad. My research leverages datasets from multiple missions, including MAVEN, the Emirates Mars Mission, Mars Express, the Mars Orbiter Mission, ACE, GOES, STEREO, and SDO, integrating both remote sensing and *in-situ* particles & fields observations. I have worked on planetary science, aeronomy, space weather and heliophysics. In previous work, I updated a 3-D Monte Carlo model to simulate atmospheric escape from planets. Currently, I am developing a vertically and horizontally coupled 2-D photochemical model to study the atmospheres of Venus and Mars.

EDUCATION

Cochin University of Science and Technology

Cochin, India

Ph.D. Physics

Jul 2021

Thesis: "Solar Energetic Particles Associated with Coronal Mass Ejections and Corotating Interaction Regions and their Influence on Martian Plasma Environment"

Advisor: Dr. Smitha V. Thampi

National Institute of Technology Calicut
